

3i SHOW Electrical Specifications

Equipment must be compatible with the outlined specs; if it is not, please note you will need to **bring the required adapter** to plug into the electrical pedestals. Adapters can be purchased at any RV dealer.

All 110-volt plugs will be standard 20-amp duplex receptacles. All 220-volt plugs will be 14-50R Nema receptacles with 240-volt 50 amp service (pictured below). Please note, RV's will be required to hook up to the 220-volt service and provide an adapter if necessary. If you need to make any changes to your electrical requests, please let us know as soon as possible!
